#### Marked-Up Version of Specification Showing Changes Made

At page 47, the abstract is amended as follows:

[In accordance with the present invention,] Pharmaceutical products are provided comprising EC progenitors [can be used in a method] for use in methods for regulating angiogenesis, i.e., for enhancing or inhibiting blood vessel formation, in a selected patient and in some preferred embodiments for targeting an angiogenesis modulator to specific locations. For example, the EC progenitors can be used to enhance angiogenesis or to deliver an angiogenesis modulator, e.g., anti- or pro-angiogenic agents, respectively to sites of pathologic or utilitarian angiogenesis. Additionally, in another embodiment, EC progenitors can be used to induce reendothelialization of an injured blood vessel, and thus reduce restenosis by indirectly inhibiting smooth muscle cell proliferation.

#### Marked-Up Version of Claim Showing Changes Made

Claim 27 is amended as follows.

27. (Amended) The pharmaceutical product of claim 26, wherein the vector comprises human immunodeficiency virus (HIV) gag and pol genes.
